

Soil Compaction Rammer

This compaction rammer is designed for efficient soil and asphalt compaction. It delivers a high impact force for optimal compaction results in demanding environments.

Overview

Professional Soil Compaction

The Tamping Rammer is a professional-grade tool engineered for high-efficiency compaction of soil and asphalt. Built for durability and performance, it delivers high impact force to ensure stable foundations in demanding construction environments. Its compact design makes it an ideal solution for trench work and maneuvering through confined spaces on-site.

Key Performance Metrics

Impact Force

100 High

Impact Performance

Applications

Primary Applications

Soil Compaction, Asphalt Compaction, Trench Work, Confined Area Construction

Features

Key Features

- Robust engine for consistent power
- High-impact compaction force
- Durable construction for long-term use
- Compact design for confined site maneuverability
