

Soil Compaction Rammer

This tamping rammer is used for compacting soil, gravel, and asphalt. It delivers high-impact blows to the ground, increasing the material's density and load-bearing capacity.

Product Overview

Versatile Soil Compaction Solution

This tamping rammer utilizes impact vibration to effectively compact backfill in layers, making it an ideal choice for cohesive soil environments. Its compact design allows it to navigate narrow sites, trenches, and courtyards where larger machinery cannot operate. Built for durability and precision, this tool ensures high stability and load-bearing capacity for construction foundations, paving, and subgrade preparation.

Technical Specifications

Power Rating

5 HP
Engine Power

Engine Model

R170F

Applications

Compatible Materials

- Cohesive soil
- Granular soil
- Asphalt
- Mixed materials

Suitable Environments

Construction, Buildings, Courtyards, Subgrade, Bridge piles, Trenches, Narrow sites
