

Soil Compaction Rammer

This soil compaction rammer is engineered for efficient and consistent performance. Its compact design makes it suitable for use in confined spaces and trenches.

Product Overview

High-Performance Soil Compaction

This robust vibratory rammer is engineered for efficient soil compaction and ground preparation in demanding construction environments. Designed for versatility, it is ideal for compacting soil, gravel, asphalt, and mixed materials, particularly in confined spaces like trenches and foundations. Its heavy-duty construction, combined with an ergonomic, shock-absorbing design, ensures both operational longevity and operator comfort.

Technical Specifications

Rated Power

4 HP

Engine Power

Suitable Applications

Soil Compaction, Gravel, Asphalt, Trenches, Foundations

Design & Build

Key Design Features

- Heavy-duty steel frame for durability
- Shock-absorbing handle for reduced operator fatigue
- Corrugated rubber bellows for efficient energy transfer
- Compact design for confined area maneuverability
