

Soil Tilling Machine

This soil tilling machine is a robust and efficient tool designed for soil preparation in agricultural and gardening applications. It features durable tines for effective soil turning and an adjustable handle for user comfort.

Product Overview

Efficiency in Soil Preparation

The BS75D Tilling Machine is a robust and efficient tool designed for professional soil preparation in both agricultural and gardening applications. It is engineered to deliver consistent and thorough tilling, which promotes healthy plant growth and ensures optimal soil conditions for various crops. Its compact design and maneuverability make it a versatile choice for everything from small garden plots to larger, more demanding field operations.

Key Features

Primary Capabilities

- Powerful engine for deep soil penetration
- Durable tines for effective soil turning
- Adjustable handle for ergonomic user comfort
- Integrated front wheel for ease of transport
- Compact design for operation in tight spaces
