

Solar Deep Well Submersible Water Pump

This solar deep well submersible pump is designed for reliable water extraction in remote locations. Constructed from stainless steel, the pump system includes a solar panel and controller to optimize performance based on solar irradiance.

Product Overview

Sustainable Water Solution

The SSW SSP Series Solar Deep Well Submersible Pump utilizes solar energy to extract water from wells, rivers, and reservoirs without the need for an external power grid. The system consists of a solar panel, a high-efficiency pump, and a controller, making it an ideal solution for remote areas. By replacing electricity storage with water storage, this system significantly reduces construction and maintenance costs while providing an environmentally friendly water supply.

Technical Features

Key Components

- Solar Panel
- Submersible Pump
- Control Box

Construction Material

Stainless Steel

Power Source

Solar Energy, Off-Grid

Applications

Ideal Applications

Irrigation • Livestock Watering • Domestic Water Supply
