

# Solar Powered LED Street Light

These solar-powered street lights are designed for urban and suburban environments. The lights feature a solar panel that converts sunlight into electricity to power the LED lamps.

## Product Overview

### Sustainable Urban Lighting Solution

These solar-powered street lights are engineered for reliable illumination in both urban and suburban environments. By utilizing integrated solar panels, the system efficiently converts sunlight into electricity to power high-performance LED lamps, eliminating the need for grid dependency. Featuring a modern dual-lamp configuration and durable, weather-resistant construction, this solution offers both environmental sustainability and long-term cost-effectiveness for outdoor infrastructure projects.

## Technical Specifications

Power Source	Solar Energy
Lighting Technology	LED
Lamp Configuration	Dual-lamp

## Design & Build

### Suitable Environments

- Urban streets
- Suburban areas
- Outdoor public spaces

Durability Features	Weather-resistant, Durable construction, Outdoor-rated
