

Solar Powered Screw Pump for Water Ex- traction

This solar screw pump is designed for efficient water extraction. It features durable stainless steel construction and is optimized for solar power.

Product Overview

Sustainable Water Extraction Solution

This high-performance solar screw pump is engineered for efficient water extraction in remote locations where reliable power infrastructure may be absent. Constructed with robust stainless steel, it ensures excellent durability and corrosion resistance under demanding environmental conditions. It serves as an ideal solution for agricultural irrigation, livestock watering, and domestic water supply, providing consistent flow rates and cost-effective operation.

Technical Specifications

Key Features

- Solar-powered operation
- High-performance screw mechanism
- Corrosion-resistant construction
- Consistent flow output

Material

Stainless Steel

Primary Applications

Agricultural Irrigation, Livestock Watering, Domestic Water Supply
