

Solar Thermal Collector for Water Heating

This high-performance solar thermal collector is engineered for efficient water heating. Its durable aluminum tray enhances longevity and weather resistance, making it suitable for both residential and commercial applications.

Overview

PSP-100 Series Solar Thermal Collector

The PSP-100 Series is a high-performance solar thermal collector engineered for efficient residential and commercial water heating. Featuring a robust aluminum tray, this unit ensures exceptional durability and weather resistance in diverse climates. By utilizing advanced solar absorption technologies, the system provides reliable heat transfer to maximize energy output and cost savings.

Technical Specifications

Construction Material	Aluminum
Application Compatibility	Residential, Commercial

Key Features

Design Advantages

- Optimized solar energy absorption
- High-efficiency heat transfer technology
- Enhanced weather resistance
- Durable aluminum chassis
