

Solar Water Heater System 6.5KWp

This solar water heater system utilizes photovoltaic panels to capture sunlight and convert it into electricity. The system includes a galvanized steel frame for support and angle adjustment.

Overview

Solar Energy System Overview

This 6.5KWp solar power system provides a robust solution for sustainable energy generation. Installed in 2006, the system features a professional-grade galvanized steel frame mounting, ensuring long-term structural integrity and optimal sunlight absorption. It is designed for reliable grid-tied operation, making it suitable for high-capacity residential or commercial energy requirements.

Technical Specifications

System Size

6.5 KWp
Capacity

Module Type	CS6P
Mounting Material	Galvanized Steel, Adjustable Frame

Project Details

Installation Location	Qinghai, China
Completion Date	August 2006
