

Solar Water Heating System

This high-efficiency solar water heating system uses evacuated tube technology for optimal heat absorption. The system is designed for residential and commercial applications, efficiently converting solar energy into hot water to reduce energy consumption and costs.

Overview

Sustainable Water Heating Solution

This high-efficiency solar water heating system utilizes advanced evacuated tube technology for optimal heat absorption. It is designed to provide reliable hot water for both residential and commercial applications while significantly reducing energy consumption. The system is engineered with a durable storage tank and a robust frame to ensure long-lasting performance and maximum sustainability.

Key Features

Service Life

25 YEARS

Expected Service Life

Suitable Applications

Residential, Commercial

Technical Details

Primary Benefits

- High thermal absorption efficiency
- Reduction in energy consumption
- Durable construction for long-term use
- Cost-effective heating solution

Absorption Technology

Evacuated Tube Technology
