

Solenoid Controlled Brass Valve

This robust valve is constructed from brass and features a solenoid actuator. It allows for remote control of fluid flow in various industrial and commercial applications.

Overview

Robust Solenoid-Controlled Brass Valve

This solenoid-controlled valve is constructed from high-quality brass, designed to provide reliable remote control of fluid flow in industrial and commercial environments. It features a solenoid actuator integrated directly with the valve body, allowing for seamless automated operation. With standard threaded connections, this valve is engineered for easy integration into existing plumbing and fluid handling systems.

Technical Specifications

Material	Brass
Actuation Type	Solenoid
Connection Type	Threaded

Applications

Industry Suitability

Industrial • Commercial • Automation

Compatible Media	Water, Air, General Fluids
