

Solenoid Operated Valve

This magnetic valve is designed for various applications requiring precise control of fluid or gas flow. It features a robust construction with a metallic housing and a solenoid actuator for reliable operation.

Product Overview

Precision Fluid Control

This solenoid operated valve is engineered for precise fluid and gas flow control in industrial applications. Featuring a robust metallic housing and a reliable solenoid actuator, it ensures consistent performance under demanding conditions. The design includes threaded ports for seamless integration into existing pneumatic or hydraulic systems.

Electrical Specifications

Maximum Current

4 A

Max Current

Rated Voltage	24 V
Working Voltage Range	18-30V

Performance & Durability

Service Life	300000 cycles
