

Solenoid Valve for Fluid/Gas Control

This solenoid valve is designed for controlling the flow of fluids or gases. It features a robust construction with a brass valve body and a solenoid actuator.

Product Overview

Industrial Fluid and Gas Control

This solenoid valve is engineered for professional industrial environments requiring precise fluid and gas flow regulation. Featuring a robust brass body and a high-performance solenoid actuator, it ensures reliable operation in demanding automated systems. Its design facilitates easy electrical integration, making it an ideal component for remote control and complex process management.

Technical Specifications

Body Material	Brass
Actuation Type	Electric Solenoid

Key Features

Operational Benefits

- Robust construction for durability
- Precise flow management
- Seamless integration with electronic control systems

Application Compatibility	Fluid Control, Gas Control, Industrial Automation, Remote Process Control
---------------------------	---
