

Solid Ink Roller Coder for Packaging

This solid ink roller coder provides a robust solution for printing on packaging materials. It ensures consistent, high-quality printing results with adjustable settings for precise control.

Product Overview

Professional Solid Ink Coding Solution

This advanced contact-type thermal ink roller printer offers a robust and efficient solution for high-quality printing on various packaging materials. It integrates intermittent heating with precise mechanical structures to allow for flexible content selection and accurate positioning. Designed for reliability in demanding industrial environments, the system features rapid printing speeds and photo-electronic counting control.

Technical Features

Printing System	Contact-type thermal ink roller
Key Capabilities	Intermittent heating, Photo-electronic counting, Adjustable positioning, Precise impression control
