

Solid Lubricant Embedded Bronze Bushings

Machined cast bronze bearings provide effective solutions for bearing applications. These bushings offer high loading capability, low weight, and good corrosion resistance.

Product Overview

High-Performance Bronze Bushings

These machined cast bronze bearings provide an ideal solution for heavy-duty industrial applications requiring high loading capabilities. Engineered with embedded solid lubricant, they ensure consistent performance in environments where traditional lubrication is challenging or impossible. The design offers superior wear resistance and a low coefficient of friction, significantly extending the service life of your machinery.

Technical Specifications

Load Handling

100 %

Load Capacity Rating

Material Composition

Cast Bronze, Solid Lubricant Embedded, Graphite

Performance Features

Key Benefits

- High loading capability
- Low weight
- Excellent corrosion resistance
- Self-lubricating graphite plugs
- Tighter manufacturing tolerances

Recommended Uses

Heavy-duty machinery • Automotive components • Industrial equipment • Slow-speed operations
