

Sound Module for Greeting Cards with Recording and Playback

This sound module is designed for greeting cards and features recording and playback capabilities. It has a built-in speaker, microphone, and potentiometer for volume control.

Product Overview

Interactive Audio Integration

This recordable sound module is specifically engineered to bring interactive audio to greeting cards, invitations, and personalized paper-based gifts. It features a compact design with a 40mm speaker and a reliable tongue-activated switch for intuitive user interaction. The system provides flexible recording durations to suit various messaging needs, ensuring a high-quality playback experience for the end recipient.
