

Speckled Spherical Grinding Media

Speckled spherical grinding media is used for polishing, deburring, and surface finishing applications. The spherical shape ensures uniform contact and even distribution of abrasive action during use.

Product Overview

Premium Speckled Spherical Grinding Media

These speckled spherical grinding media are engineered for high-performance surface finishing, including polishing and deburring applications. Their distinct spherical geometry ensures uniform contact and consistent abrasive action across the entire workpiece. Designed for versatility, they are ideal for use in vibratory finishing machines, tumbling barrels, and various industrial surface treatment equipment.

Physical Properties

Shape	Spherical
Visual Characteristics	Speckled, Multi-colored, Green, Blue, Yellow, White

Applications

Primary Applications

- Polishing
- Deburring
- Surface finishing

Compatible Equipment

Vibratory finishing machines • Tumbling barrels
