

Spherical Grinding Media in Mesh Netting

These spherical abrasive spheres are designed for grinding and polishing applications. The mesh netting ensures easy handling and containment of the media during use.

Product Overview

Professional Abrasive Solution

These spherical grinding media are specifically designed for high-performance surface preparation, deburring, and polishing applications. Contained within convenient white mesh netting, the media offers consistent abrasive action while ensuring easy handling and containment during use. This design is ideal for achieving smooth, uniform finishes on a wide variety of industrial materials.

Technical Specifications

Media Shape	Spherical
Packaging Format	Mesh Netting

Application & Usage

Handling Benefits

- Easy containment during operation
- Simplified handling
- Consistent abrasive distribution

Primary Applications	Surface Preparation, Deburring, Polishing, Grinding
