

Spherical Roller Bearing 24172CAK30/W33C3 for Food Processing Machinery

This high-precision roller bearing is designed for demanding industrial applications, offering exceptional load-bearing capacity and durability. It features a robust construction with hardened steel rollers and races, ensuring smooth and reliable operation under heavy loads and harsh conditions.

Product Overview

High-Performance Spherical Roller Bearing

This spherical roller bearing is engineered for demanding industrial environments, specifically suitable for food processing machinery. Built with hardened steel rollers and races, it provides exceptional load-bearing capacity and durability under heavy operational conditions. Its design ensures smooth, reliable rotation with minimal friction, making it an ideal component for precise mechanical systems.

Technical Details

Bearing Type	Spherical Roller Bearing
Model Number	24172CAK30/W33C3

Application

Industry Applications	Food Processing, Mechanical Equipment, Engineering, Railway, Automotive, Steel Industry, Papermaking
-----------------------	--

Design Features

Construction

- Hardened steel rollers
- Hardened steel races
- High-precision engineering

Performance Metrics

1 High

Rotational Precision

1 Minimal

Friction Level
