

Spiked Surface Preparation Roller

This manual surface preparation tool features a spiked roller. It is designed for preparing surfaces by creating perforations or indentations to improve adhesion.

Product Overview

Professional Surface Preparation

The Spiked Surface Preparation Roller is an essential tool designed to optimize surfaces for flooring installation and concrete repair. By creating precise perforations and indentations, this roller ensures a keyed surface that promotes superior adhesion and bonding. Its durable construction allows for reliable manual operation in demanding site environments.
