

Spiral Conveyor System

This spiral conveyor system is designed for continuous vertical transportation of goods. It features a stainless steel construction, a modular belt with a smooth surface, and a compact footprint.

Product Overview

Continuous Vertical Transportation Solution

This spiral conveyor system is engineered for efficient, continuous vertical transportation of goods within demanding production environments. Featuring a robust stainless steel construction and a modular belt design, it offers a smooth, reliable transport surface. Its compact footprint makes it an ideal integration for food processing, packaging, and manufacturing facilities where floor space is at a premium.

Technical Specifications

Material	Stainless Steel
Belt Design	Modular belt with smooth surface
Key Features	Continuous Vertical Transport, Compact Footprint, Easy Maintenance, Easy Cleaning

Drive System

- Drive Unit
- Motor
 - Gearbox

Industry Applications

Suitable Industries
Food Processing • Packaging • Manufacturing
