

Spiral Duct Former

A spiral tubeformer manufactures spiral ducts and tubes from metal strips. The machine continuously forms the metal strip into a spiral shape and joins the edges to create a rigid tube.

Product Overview

Professional Spiral Duct Manufacturing

The Spiral Duct Former is a robust industrial machine designed to efficiently manufacture high-quality spiral ducts and tubes from metal strips. By continuously forming metal strips into precise spiral shapes and securely joining the edges, it produces rigid, durable tubing suitable for demanding HVAC and industrial ventilation applications. This equipment is essential for facilities requiring high-speed, consistent ductwork production solutions.

Technical Capabilities

Primary Function	Continuous spiral duct and tube formation from metal strips
Industry Applications	HVAC, Ventilation, Industrial Tubing

Construction

Duct Type
Spiral • Rigid
