

# Split Air Conditioner with Air Purification

This split air conditioner features a micro-positive pressure adaptive fresh air system for rapid ventilation. The unit's intelligent airflow provides shower-type cold wind and floor-heating hot air, while high-concentration dual ion technology removes bacteria.

## Product Overview

### Fresh Master Series Split Air Conditioner

This split air conditioner is engineered with a micro-positive pressure adaptive fresh air system to ensure rapid ventilation and indoor air quality. It utilizes a high static pressure cross-flow duct design for extended air supply distances and increased volume. Advanced Hi-nano technology releases high-concentration dual ions to effectively eliminate airborne bacteria, creating a healthier living environment.

## Airflow Performance

### Airflow Technologies

- Micro-positive pressure adaptive fresh air system
- High static pressure cross-flow duct design
- Volute linear fan for increased air volume
- Shower-style cold wind distribution
- Floor-heating style hot air distribution

## Air Quality & Health

### Purification Technology

Hi-nano Ionization, Dual Ion Release, Bacterial Removal

## Design & Aesthetics

### Design Style

Simple • Fashion • Natural
