

Split Body Metal Anchors

These precision-engineered industrial fasteners provide secure anchoring in various materials. Their split body construction expands for enhanced grip, ensuring optimal holding power and durability in heavy-duty applications.

Product Overview

Precision Engineered Anchoring Solutions

These split body metal anchors are designed for secure and reliable fastening across a wide range of industrial materials. Featuring a unique split body construction, they expand upon installation to provide enhanced grip and optimal holding power. Built from high-strength metal alloy with a corrosion-resistant finish, these fasteners are engineered for durability in demanding environments.

Technical Details

Construction Type	Split body
Material	High-strength metal alloy
Finish	Corrosion-resistant

Applications

Key Performance Features

- Expansion mechanism for enhanced grip
- Optimal holding power
- Durable construction
- Corrosion resistance

Suitable Industries	Construction, Manufacturing, Maintenance
