

# Split Case Centrifugal Pump for Fluid Transfer

This centrifugal pump is designed for high-capacity fluid transfer. The pump features a horizontally split case for easy maintenance and inspection.

## Product Overview

### High-Capacity Fluid Transfer Solution

This split case centrifugal pump is engineered for demanding industrial fluid transfer applications. Featuring a robust, horizontally split casing design, it allows for convenient maintenance and inspection without disturbing the piping or driver alignment. It is an ideal choice for large-scale operations in water supply, irrigation, and complex process fluid handling.

## Design & Construction

Casing Design	Horizontally split case
Maintenance Access	Yes

## Technical Specifications

Drive Compatibility	Shaft coupled to motor or external drive
---------------------	--

## Applications

Performance Class	High-Capacity • Industrial Grade
Primary Applications	Water Supply, Irrigation, Process Fluid Handling
