

Split Case Centrifugal Pump for High Flow Applications

This split case centrifugal pump is designed for high flow and high head applications. It features a robust cast iron casing and dynamically balanced impeller for reliable performance in water supply, irrigation, and industrial fluid transfer.

Product Overview

High-Performance Split Case Centrifugal Pump

This split case centrifugal pump is engineered for demanding high-flow and high-head applications, ensuring reliable fluid transfer. Built with a robust cast iron casing and a dynamically balanced impeller, it is designed for durability and smooth operation. It is an ideal solution for large-scale water supply, agricultural irrigation, and industrial fluid transfer systems.

Technical Specifications

Construction Materials

- Cast iron casing

Model Number

KST-1540-150

Key Features

High Flow, High Head, Dynamically Balanced Impeller, Heavy-Duty Bearings

Applications

Suitable Applications

Water Supply • Irrigation • Industrial Fluid Transfer
