

Split Case Centrifugal Pump for Water Transfer

This centrifugal pump is designed for high-capacity water transfer and industrial applications. The pump features a horizontally split casing, allowing easy maintenance and inspection without disturbing the piping.

Overview

High-Capacity Split Case Centrifugal Pump

This split case centrifugal pump is engineered for demanding water transfer and industrial applications. Featuring a robust, horizontally split casing design, it allows for efficient maintenance and inspection without the need to disturb existing piping connections. The unit incorporates a double suction impeller to ensure balanced hydraulic thrust and superior operational efficiency, making it an ideal solution for large-scale water supply, industrial processing, and irrigation systems.

Technical Specifications

Model Number	KSY-3500-150
Key Design Features	Horizontally Split Casing, Double Suction Impeller, Easy Maintenance Access

Applications

Suitable Applications

- Industrial Water Transfer
- Municipal Water Supply
- Large-Scale Irrigation Systems
- Industrial Process Cooling
