

Split Large Ice Machine

This ice machine uses air-cooled refrigeration technology to improve ice-making efficiency and maximize energy savings. Microcomputer controls automate water filling, ice making, and ice dispensing, while a unique push bar design shortens ice removal time.

Product Overview

Professional Split Ice Machine

This split large ice machine utilizes advanced air-cooled refrigeration technology to significantly improve ice-making efficiency while maximizing energy savings. Designed for reliability, the system features microcomputer-controlled automation for water management and ice production cycles. The unit is engineered for durability and safety with built-in fault protection and automatic recovery systems.

Technical Features

Core Features

- Air-cooled refrigeration technology
- Fully automatic microcomputer control
- Unique push-ice bar design for faster production
- Automatic fault protection and recovery
- Power failure automatic restart

Certifications

Quality Standards

ISO 9001, ISO 14000
