

SPMT 120408 Milling Inserts

These SPMT 120408 milling inserts are suitable for machining steel, stainless steel, and cast iron. They offer stable performance and long use life.

Product Overview

Precision Milling Performance

The SPMT 120408 milling inserts are professional-grade cemented carbide tools engineered for stability and high performance in CNC machining environments. These inserts provide excellent longevity and efficient material removal across diverse applications. Designed to meet high-quality industrial standards, they offer a reliable solution for precision cutting tasks.

Technical Specifications

Commodity Code	SPMT 120408
Compatible Materials	Steel, Stainless Steel, Cast Iron

Service & Quality

Key Benefits

- Long use lifetime
- Stable performance
- Competitive pricing
- Custom manufacturing available based on drawings or samples

Order & Support

Small orders accepted • Technology support available • After-sales service
