

Spot Welding Machine

This spot welding machine joins metal pieces using localized heat and pressure. It is used in manufacturing and fabrication to create strong, reliable joints in sheet metal and other metallic components.

Product Overview

Industrial Spot Welding Solution

This robust spot welding machine is engineered for precision joining of sheet metal and various metallic components. Featuring a durable blue metal cabinet, it is designed for demanding industrial fabrication environments. The unit utilizes a resistance welding process with horizontally opposed electrodes, controlled via an intuitive front-panel interface for consistent weld quality.

Technical Specifications

Key Metrics

2 count

Electrode Arms

Operation Method

Resistance welding with foot pedal actuation

Control Features

Adjustable Current, Adjustable Duration, Manual Control Panel

Construction & Build

Best For

Sheet Metal Fabrication • Metal Component Assembly

Housing

Robust blue metal cabinet
