

# Spring Tool Balancer

Tool balancer reduces worker fatigue and improves working efficiency. It maintains the tool at a desired height.

## Product Overview

### Industrial Ergonomic Solution

This spring tool balancer is designed to effectively counterbalance tool weight, making heavy equipment feel nearly weightless during operation. By maintaining tools at a desired height, it significantly reduces worker fatigue and improves overall working efficiency in industrial environments. It also protects both equipment and personnel from accidental damage, ensuring a safer and more organized workspace.

## Technical Details

### Load Capacity Range

**70 kg**

Minimum Capacity

**80 kg**

Maximum Capacity

## Usage Instructions

### Installation and Adjustment

- Inspect all parts for integrity and cleanliness before use.
- Securely hang the spring balancer at the desired workstation point.
- Adjust the spring tension to match the specific weight of your tool.
- Ensure the balancer is functioning correctly before attaching tools.

### Benefits

Reduced Fatigue, Improved Efficiency, Equipment Protection, Safety Enhanced
