

Spring Washers

Spring washers are designed to provide a secure fastening, preventing loosening due to vibration and corrosion. The split in the ring creates tension when compressed, increasing friction and resistance to rotation of the fastener.

Product Overview

Industrial Fastener Solutions

This comprehensive range of industrial washers includes spring, square, and flat types engineered for high-performance fastening. Designed to prevent loosening due to vibration, these components ensure long-term structural integrity in demanding mechanical environments. Each washer is crafted from durable materials to provide optimal load distribution and corrosion resistance across automotive and construction applications.

Technical Specifications

Materials

- Hardened Steel
- Brass

Surface Finish

Zinc Plated

Available Types

Spring Washers, Flat Washers, Square Washers, Lock Washers

Design Features

Design Specifications

Washer Type	Key Function
Spring/Lock Washer	Prevents loosening via tension
Flat Washer	Load distribution and friction reduction
Square Washer	Alignment on angled surfaces
