

Sprue Bushings Locating Rings

Sprue bushings facilitate the efficient flow of molten material in injection molding. Locating rings ensure precise alignment and secure positioning of components.

Product Overview

Essential Mold Components

Sprue bushings and locating rings are critical components in the injection molding process. Designed to facilitate precise alignment between the machine nozzle and the mold, these parts ensure consistent material flow and structural integrity. They are engineered to withstand high pressure and thermal cycling, supporting efficient manufacturing operations.

Component Details

Included Components	Sprue Bushing, Locating Ring
Application	Injection Mold Components
