

Sprung Hub Clutch Disc

High-performance clutch plate designed for optimal power transfer and durability. It features a sprung hub for vibration damping and high-friction facings for enhanced grip.

Product Overview

High-Performance Sprung Hub Clutch Disc

This sprung hub clutch disc is engineered for optimal power transfer and superior durability in demanding applications. Featuring a specialized sprung hub design, it effectively dampens vibrations while providing smooth, precise engagement. Built with high-friction facings, this component ensures reliable grip and consistent performance across various driving conditions.

Technical Specifications

Hub Design	Sprung Hub
Key Features	Vibration Damping, High-Friction Facing, Robust Construction, Precise Engagement
