

Square Conduit Extension Box

This square conduit extension box is made of galvanized steel. It is designed for extending electrical boxes and providing additional wiring space with multiple knockouts for conduit entry.

Overview

Professional Electrical Extension Solution

The Square Conduit Extension Box is a robust electrical component designed to extend existing electrical boxes and provide essential additional wiring space. Constructed from high-quality pre-galvanized steel, this box is engineered for durability in both wall and ceiling installations. It is an ideal solution for managing complex electrical configurations, allowing power to be efficiently routed to multiple devices.

Physical Specifications

Shape	Square
Depth	1.5 in
Box Size	4 inch
Material	Pre-Galvanized Steel
Construction	Drawn

Technical Details

Capacity

21 Cu. In.

Volume

Grounding

- Raised ground emboss (RGB)
- Installed 10/32 ground screw (where noted)

Knockout Configuration

Multiple KO sizes, Concentric Knockouts (CKO) available

Applications

Primary Applications

- Wall installations
- Ceiling installations
- Lighting fixture support
- Switch housing
- Outlet device housing
- Conductor splitting
