

Stabilizer Bar Link SP-2201

This stabilizer bar link connects the stabilizer bar to the suspension, typically the control arm or strut assembly. It transfers force between the wheels, reducing body roll during cornering and improving vehicle stability.

Product Overview

Stabilizer Bar Link SP-2201

The Stabilizer Bar Link SP-2201 is a critical suspension component engineered to enhance vehicle stability by effectively connecting the anti-roll bar to the suspension system. By facilitating the transfer of force between wheels during maneuvers, this part significantly minimizes body roll while cornering. Designed for durability and performance, it features robust articulation points to handle continuous road stresses.

Technical Specifications

Included Hardware

- Nut
- Washers

Key Features

Anti-roll function • High articulation • Direct fit

Component Type	Stabilizer Bar Link
Materials	Steel, Reinforced Polymer
