

# Stainless Steel Centrifugal Water Pump

This stainless steel centrifugal pump is suitable for transporting clean media in water supply and pressure boiler systems. It is also used in pharmaceutical, food, refining chemical industries, washing, and sprinkling applications.

## ADDITIONAL IMAGES

## Product Overview

### High-Efficiency Stainless Steel Pump

This centrifugal water pump is engineered for reliable and consistent fluid transfer across residential, commercial, and industrial environments. Constructed with high-grade AISI 304 stainless steel, the unit provides exceptional corrosion resistance and durability for long-term operation. Its compact design facilitates easy installation in space-constrained areas, while the centrifugal impeller ensures efficient flow rates for circulation, boosting, and general water transfer tasks.

## Materials & Construction

### Housing Components

- Pump body
- Back-cover
- Impeller
- Shaft
- Guide plate

Wetted Parts Material	AISI 304 Stainless Steel
-----------------------	--------------------------

Motor Casing & Bracket	Aluminum
------------------------	----------

## Technical Specifications

### Pump Type

Centrifugal • Electric

Mechanical Seal Composition	Ceramic, Graphite, NBR
-----------------------------	------------------------

## Applications

### Suitable Applications

- Water circulation
- Pressure boosting
- General water transfer
- Irrigation
