

Stainless Steel Chain Conveyor System

This chain conveyor system is constructed from stainless steel and features adjustable guide rails. It utilizes a motorized drive unit and a modular design for integration into automated production lines.

Product Overview

Industrial Conveyor Solution

This stainless steel chain conveyor system is engineered for versatility and durability in automated production environments. Featuring a modular design, it allows for flexible configuration and seamless integration into existing lines. The system includes adjustable guide rails and a robust motorized drive unit, making it an ideal choice for transporting small to medium-sized products efficiently.

Construction & Design

Material	Stainless Steel
Design Features	Modular Design, Adjustable Guide Rails, Mobile Stand, Locking Casters

Operational Capabilities

Suitable For

- Automated production lines
- Small-sized products
- Medium-sized products
- Various industrial applications

Drive System	Motorized Drive Unit
