

Stainless Steel Filter Housing Unit with Pump Head

This stainless steel filter housing unit features a cylindrical body and a pump head mechanism. It is designed for filtration applications in various industrial and commercial settings.

Product Overview

Industrial Filtration Solution

This stainless steel filter housing unit is engineered for reliable filtration across diverse industrial and commercial environments. The robust, polished stainless steel construction ensures long-term durability and resistance to corrosion, making it suitable for demanding applications. Featuring an integrated pump head mechanism with a chrome-plated dispensing nozzle, the unit provides a stable and efficient solution for fluid management tasks.

Technical Specifications

Housing Material	Polished Stainless Steel
Pump Head Material	Black Plastic
Nozzle Finish	Chrome-plated
Design Features	Corrosion Resistant, Stable Base, Cylindrical Body

Applications

Primary Applications

- Industrial filtration
- Commercial fluid management
