

Stainless Steel Flanged Ball Valve

This flanged ball valve is constructed from stainless steel and features a full port design for unrestricted flow. It is equipped with a yellow lever handle for manual operation and precise flow control.

Product Overview

Industrial Stainless Steel Ball Valve

This stainless steel flanged ball valve is engineered for demanding industrial environments, featuring a robust full port design that ensures unrestricted flow. Constructed from high-quality 304 grade stainless steel, it provides excellent durability and corrosion resistance for critical piping systems. The valve is equipped with a manual lever handle for precise flow control and utilizes secure flanged connections to maintain a leak-proof seal in various applications.

Technical Specifications

Material Grade

SS 304

Size

3/4 inch

Port Design

Full Port

Operation

Manual Lever Handle

Connection Type

Flanged

Applications

Suitable Industries

Chemical Processing, Water Treatment, Oil and Gas
