

Stainless Steel Open Impeller Centrifugal Pump

This centrifugal pump features an open impeller and hydraulic components made from stainless steel AISI 304. It is suitable for handling suspended solids in food processing, painting plants, and general dirty liquid handling.

Product Overview

Industrial Stainless Steel Performance

The SPO series centrifugal pump is engineered with a specialized open impeller design, making it the ideal solution for transferring fluids containing suspended solids or abrasive particles. Constructed from high-grade stainless steel, this unit provides exceptional corrosion resistance, ensuring durability in demanding chemical and food processing environments. The compact, robust architecture is optimized for consistent performance, easy maintenance, and reliable operation across a wide range of industrial fluid management applications.

Technical Specifications

Motor Speed

2900 r/min

Rotational Speed

Protection Rating

IP55

Insulation Class

F

Design Features

Impeller Design

Open Impeller

Material Composition

Stainless Steel, Corrosion Resistant

Applications

Suitable Industries

- Water Treatment
- Chemical Processing
- Food and Beverage
- Industrial Fluid Transfer
