

Stainless Steel Pressure Transducers

These stainless steel pressure transducers are designed for accurate and reliable pressure measurement in industrial applications. They are suitable for hydraulic and pneumatic systems, process control, and general industrial automation.

Overview

High-Performance Pressure Measurement

These stainless steel pressure transducers are engineered for accurate and reliable pressure measurement across a wide range of industrial applications. Featuring a compact and robust construction, they are designed to withstand demanding environments while maintaining precision. They are an ideal solution for hydraulic and pneumatic systems, process control, and general industrial automation needs.

Technical Specifications

Design Features

- Compact design
- Robust construction
- Versatile electrical connections
- Wide pressure range compatibility

Material

Stainless Steel

Suitable Applications

Hydraulic Systems, Pneumatic Systems, Process Control, Industrial Automation
