

Stainless Steel Self-Tapping Fastener Screws

These self-tapping screws are constructed from stainless steel. Their design allows for direct installation into materials like metal, plastic, and wood without pre-drilling.

Product Overview

High-Performance Fastening Solutions

These stainless steel self-tapping screws are engineered for secure and reliable fastening across metal, plastic, and wood applications. Featuring a specialized sharp, pointed tip, they eliminate the need for pre-drilling to significantly increase installation efficiency. Constructed from high-grade stainless steel, these fasteners offer superior corrosion resistance and long-term structural integrity for professional projects.

Technical Specifications

Installation Features

- Self-tapping thread design
- Sharp pointed tip
- No pre-drilling required

Material	Stainless Steel
