

Stainless Steel Submersible Deep Well Water Pump

This submersible pump is designed for efficient water extraction from deep wells. It features a multi-stage impeller design for high head and flow rate performance and is equipped with a built-in check valve to prevent backflow.

Product Overview

High-Performance Submersible Extraction

The 100QJ5 series submersible deep well water pump is engineered for efficient and reliable water extraction from deep sources. Constructed with durable stainless steel, this unit offers exceptional longevity and resistance to corrosion in demanding environments. Its multi-stage impeller design ensures high head and flow rate performance, making it an ideal solution for agricultural irrigation, domestic water supply, and industrial applications.

Technical Specifications

Material	Stainless Steel
Cooling System	Water-cooled (submerged operation)
Safety Features	Built-in check valve, Corrosion resistant, Submerged operation

Applications

Suitable Applications

- Agricultural irrigation
- Domestic water supply
- Industrial water extraction
