

Stainless Steel Submersible Water Pump

This submersible pump series is designed for underwater operation, featuring a compact structure and lightweight design. It offers installation, usage, and maintenance convenience, along with safe operation and energy-saving benefits.

Product Overview

High-Performance Stainless Steel Submersible Pump

This stainless steel submersible pump series is engineered for efficient water extraction in demanding environments. Featuring a multi-stage design, it offers superior pressure and flow rates suitable for deep wells, industrial applications, and irrigation systems. The robust, corrosion-resistant construction ensures long-term reliability even in sandy conditions, while the high-performance motor provides consistent power for various pumping tasks.

Technical Specifications

Operating Conditions

- Dilute and clean non-corrosive liquids
- Free from solid grains or fibers
- Suitable for deep wells and underground water level lowering

Protection Grade	IP 68
Insulation Class	B
Standards	NEMA
Outlet Size	G1 1/4" - G1 1/2"

Performance Data

Model Specifications

Model	Motor (Hp)	Length (mm)	Weight (kg)
4SP14-05A	2	809	17.8
4SP14-07A	3	931	21
4SP14-10A	4	1133	27
4SP14-13A	5.5	1323	30.5
4SP14-15A	7.5	1405	34.5
4SP14-18A	7.5	1621	36
4SP14-21A	10	1805	39.5
4SP14-25A	10	1973	41.5
