

Stainless Steel Submersible Water Pump

This stainless steel submersible pump is a robust and efficient solution for drainage and irrigation. Its stainless steel construction ensures durability and resistance to corrosion, making it suitable for demanding environments.

Product Overview

Robust Submersible Performance

This stainless steel submersible pump is engineered for efficient water management in demanding drainage and irrigation environments. Featuring a powerful 900W motor and a high flow rate, it provides reliable performance for agricultural and construction site applications. Its corrosion-resistant construction ensures longevity and durability, making it an essential tool for professional water removal needs.

Performance Specifications

Performance Metrics

900 W

Input Power

36 m

Maximum Lift Height

5400 L/h

Flow Rate

Technical Details

Material

Stainless Steel

Electrical Requirements

230V / 50Hz

Logistics

20' Container Capacity

2100 pcs
