

Stainless Steel Submersible Water Pump with Float Switch

This submersible pump is designed for wastewater drainage in factories, construction sites, and commercial facilities. It is also suitable for drainage systems in municipal sewage treatment plants and residential quarters.

Overview

Robust Stainless Steel Submersible Pump

This submersible pump is engineered from high-grade stainless steel, ensuring exceptional corrosion resistance and long-term durability in demanding environments. Equipped with an integrated float switch, it provides reliable automatic operation by starting and stopping based on water levels. Designed for versatility, this unit is an ideal solution for drainage, sewage management, and various industrial water removal applications.

Operating Limits

Max Immersion Depth	5 m
Max Liquid Temperature	40
Liquid PH Value Range	5-9

Key Features

Material	Stainless Steel
Operation Mode	Automatic (Float Switch)
Safety Features	Thermal Overload Protection, Corrosion Resistant
