

Stainless Steel Water Filter Housing

This stainless steel filter housing is designed for purification and water processing applications. The vertical vessel includes multiple ports, a pressure gauge, and a sturdy base for stable installation, making it suitable for various industrial filtration needs.

Product Overview

Industrial Filtration Excellence

This stainless steel filter housing is engineered for high-performance liquid purification and water processing applications. Its vertical vessel design incorporates a pressure gauge for real-time monitoring and a robust base for secure, stable installation in professional environments. The unit features multiple inlet and outlet ports, providing the versatility required for various industrial filtration configurations.

Technical Specifications

Material	Stainless Steel
Orientation	Vertical
Monitoring	Pressure Gauge, Inlet/Outlet Ports

Applications

Typical Applications

- Liquid Purification
- Water Processing
- Industrial Filtration
