

Stationary Diesel Generator for Electricity Supply

This diesel generator is a self-contained power generation unit designed for reliable electricity supply. It features a robust diesel engine coupled with an alternator, mounted on a sturdy base frame.

Overview

Reliable Power Generation

This stationary diesel generator is a self-contained power generation unit engineered for consistent electricity supply. Designed for both primary and backup power applications, it features a robust engine and alternator assembly mounted on a durable base frame. The system includes integrated cooling and air filtration components to ensure long-term operational stability in demanding environments.

Technical Specifications

Installation Type

Stationary

Key Components

- Diesel Engine
- Alternator
- Base Frame
- Radiator Cooling System
- Air Intake Filter
- Control Panel

Power Source

Diesel

Application

Suitable Applications

Backup Power, Primary Power Supply
