

Steel Bar Straightening and Polishing Machine

This machine is designed for straightening and polishing steel bars. It ensures a smooth and accurate finish with consistent quality and dimensional accuracy.

Overview

High-Precision Steel Processing

This advanced machinery is engineered for the production of bright steel bars, integrating centerless lathe, peeling, and burnishing capabilities. Utilizing the latest technology, the equipment ensures high-efficiency processing with low energy consumption. It is designed to meet mainstream international machining requirements, providing consistent quality and dimensional accuracy for high-volume industrial environments.

Technical Specifications

Peeling Diameter Range

10 mm

Min Diameter

250 mm

Max Diameter

Straightening Diameter Range

10 mm

Min Diameter

160 mm

Max Diameter

Capabilities

Core Functions

Centerless Lathe, Steel Peeling, Burnishing, Straightening

Customization Options

Yes

Global Reach

Key Export Markets

- Russia
- Japan
- India
- Taiwan
